abubakar98.vercel.app

Skills

Programming
Python

Machine Learning
Machine Learning, Scikit-learn, Model Training & Evaluation

Data Analysis
Pandas, NumPy, Data Preprocessing

Deep Learning
Neural Networks, Deep Learning Fundamentals, OpenCV

Web Development
Flask, FastAPI, Python Web Applications

Tools & Version Control
Git, GitHub

Certifications

AI & Data Science
SMIT · 2026

Advanced Python Programming
NAVTTC · 2026

Python Essentials 1
Cisco Networking Academy · 2025

Languages

- Urdu
- English

Summary

AI & Data Science enthusiast with practical project experience in Python, Machine Learning, and predictive modeling. Familiar with Pandas, NumPy, Scikit-learn, data preprocessing, and Python-based application development. Interested in building practical applications and data-driven solutions.

Education

Intermediate — Pre-Medical
Completed

Projects

Mind-Predict-AI
Python · FastAPI · Scikit-learn · Pandas

- Developed a web-based mental health score prediction project that estimates a score from student inputs such as social media usage, sleep, study hours, and stress level.
- Built a FastAPI backend with a validated prediction endpoint that serves a trained machine learning model through a web interface.

  GitHub: github.com/Abubakarshaikh98/MindPredict_AI

Cardiovascular Disease Prediction
Machine learning project focused on predicting cardiovascular disease risk using patient health data.
GitHub: github.com/Abubakarshaikh98/Data_science_project

AI Face Recognition Attendance System
Python · OpenCV · Flask · ONNX Runtime · Pandas

- Built an AI-based face recognition and attendance tracking system that detects faces from a webcam, identifies registered people, and estimates facial emotion using pre-trained ONNX models.
- Developed a Flask dashboard with admin login that records attendance automatically (one entry per person per day), with history, CSV export, and analytics charts.
